

WHAT ARE HEALTH CENTERS?

Health centers are consumer-driven and patient-centered organizations that serve as a comprehensive and cost effective primary health care option for America’s most underserved communities. Health centers serve everyone regardless of ability to pay or insurance status. They increase access to health care and provide integrated care services based on the unique needs of the communities they serve. Health centers deliver value to and have a significant impact on America’s healthcare system. They also:

- Serve as the health care home for more than **27 million patients** in over **10,000 communities** across the country;
- Reduce health care costs and produce savings – on average, health centers save **24% per Medicaid patient** when compared to other providers;
- Integrate critical medical and social services such as oral health, mental health, substance abuse, case management, and translation, under one roof;
- Employ **over 200,000 people** and **generate over \$45 billion in total economic activity** in some of the nation’s most distressed communities;
- Serve on the front lines of **public health crises and natural disasters**; and
- Provide care to **1.3 million homeless patients** and more than **330,000 veterans**.
